

PUFFINS

Amazing Beak

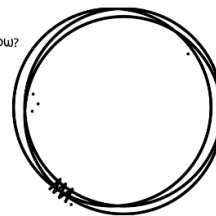

Puffins have puffed-up appearance and their chicks are fluffy. Puffins look almost like round balls. They are also called "sea parrots" or "tropical penguins" because of their brightly coloured beaks. In the winter, their beaks and their brightly coloured feet fade to a greyish colour.

Puffins have a beak that glows. Exactly why a puffin has a beak that glows is a bit of a mystery. But many marine animals such as corals, sea turtles, seahorses and sharks emit a luminous glow under the water. If you shine blue light on them they glow.

When is it great to glow?

What is light?
