

GIRAFFE Life Cycle

1. The female giraffe gives birth to a calf after being pregnant for 15 months.

2. The calf can stand up in half an hour. The calf can run with its mother ten hours after it was born.

5. The calf grows taller and starts eating grass and leaves.

3. The calf gets tired quickly. The mother protects the baby giraffe.

4. Calves drink their mother's milk for nine to twelve months.
