

OVIPAROUS ANIMALS BUNDLE

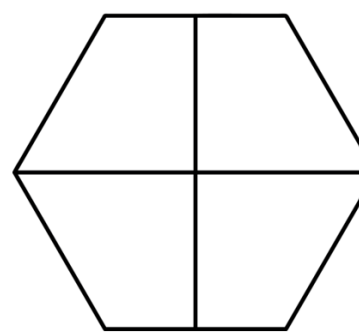

ECHIDNA EGG

Echidnas are very special mammals since they lay egg. There are only five species in the whole world that are monotremes - egg laying mammals. Four of these are echidnas and one is another Australian animal – platypus. The female lays one egg. The egg is tiny about the size of a grape. The echidna egg is different from eggs that you be familiar with.

ECHIDNA EGG

Look for information about echidnas' special egg. Fill in the shape with interesting facts.

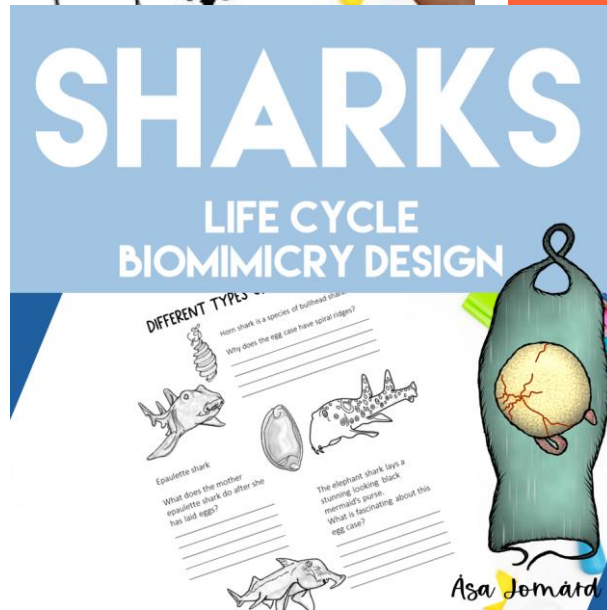

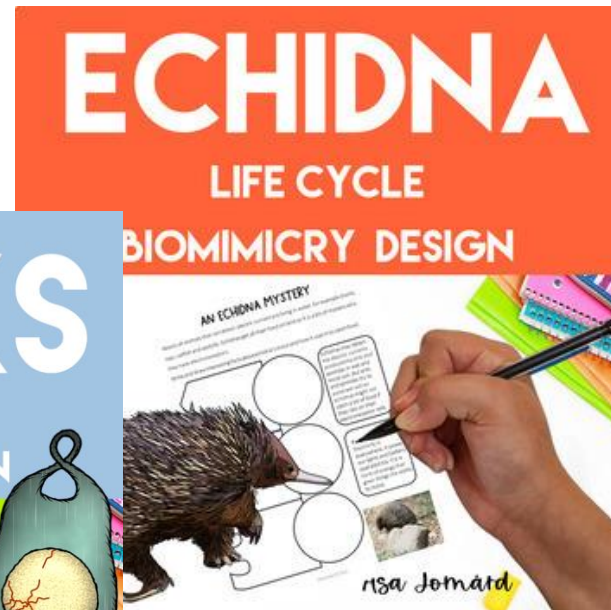

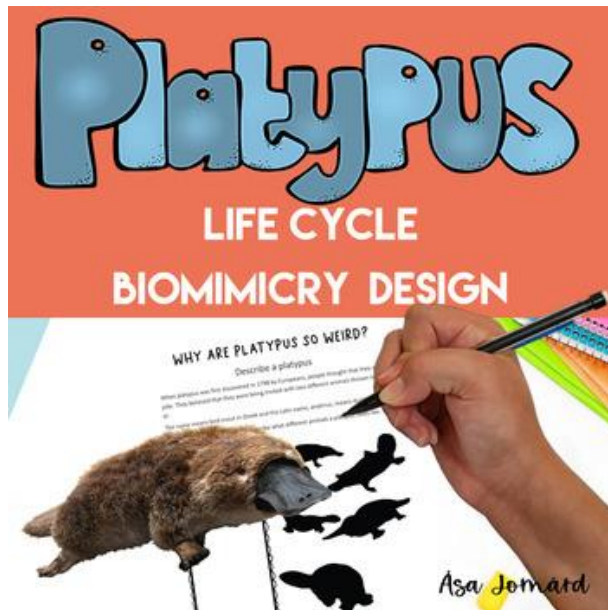

Think Dive © 2023

Looking for an hands-on lessons and activities that engage children in environmental literacy?
