REVIEW – GROUNDHOG LIFE CYCLE

My students loved this unit!! Will definitely be using it every year for Groundhog Day now--thank you so much!

A fascinating way to celebrate Groundhog's Day in class; all while learning more about the animal! My students had a blast with the design challenges. Thank you so much!

HOW DOES THE GROUNDHOG PREDICT THE WEATHER

What happens if the groundhog **can** see its shadow?

OPINION - WHAT I THINK

Groundhog day may look like a great day to find out about the Spring weather. Will the groundhog see its shadow?
Some people think that groundhogs, who are shy animals, should not be put on display. They should also not be interrupted from their hibernation.

Arguments **for** using Groundhogs to predict the Spring weather

Arguments **against** using Groundhogs

Suggested uses

- Cut out and laminate.
- Shuffle the cards and put in the correct order.
- Use as a wall display.
- Use as inspiration for storytelling.

Life Cycle Stages

1. The groundhog wakes up after its hibernation in February. The male prepares for the mating season.
2. The mother gives birth to 2 to 6 young. The baby groundhogs are blind and hairless.
3. The kits stay with their mother for months.
4. The young often goes off and leave their mother after they have been weaned.
5. The groundhog kit prepares for winter hibernation by eating fruits and seeds.

Stage 1.

The groundhog wakes up after its hibernation in February. The male prepares for the mating season and starts looking for a female.

Stage 2.

The mother gives birth to 2 to 6 young. The baby groundhogs are blind and hairless.

Stage 3.

The kits, also called pups or chucklings, stay with their mother for months.
