Summer MORPHOLOGY VOCABULARY
Name: _____ Date: _____

Lights of the Summer Fair

The summer fair buzzed with energy as Noah stepped through the entrance gates. Bright lights flickered overhead, and the sound of music mixed with laughter and excited voices. It felt like the whole town had gathered for this yearly **festival**. "Stay close," his older cousin Ava said, smiling as she handed him a map. "There's a lot to see."

Noah barely heard her. His eyes were fixed on the towering Ferris wheel glowing against the fading **solar** light of the evening sky.

They passed rows of food stalls, each one more tempting than the last. The smell of fried dough and sweet syrup seemed to **refresh** the air around them. Nearby, a group of performers entertained a crowd, their movements full of rhythm and colour.

At one stall, Noah noticed a display about insects and **biology**. Curious, he leaned closer.

"Did you know," the presenter said, "that some insects begin **migration** during the warmer months?"

Noah nodded, remembering something similar from school. Summer was a time of movement and life for many insects.

As the night grew warmer, the air became slightly **humid**, and the lights of the fair shimmered more brightly. Noah and Ava finally joined the line for the Ferris wheel. At the top, Noah looked out over the fair. From above, everything seemed smaller, yet more magical. The music, the lights, the laughter all blended into one unforgettable moment of summer **recreation**.

"This is amazing," Noah said softly.

Ava smiled. "That's why everyone comes back every year."

Noah knew she was right. Some summer nights were meant to be remembered forever.

The Longest Day

Lila stepped onto the warm sand just as the solar glow of the early morning sun stretched across the horizon. Today was the longest day of summer, and her family had planned a full day of recreation at the coast.

Don't forget your water," her mum called. "You need to hydrate before it gets too hot."

Lila nodded, already feeling the rising temperature on her skin. The air was slightly humid, making each breath feel heavier than usual. Still, she smiled. She loved the summer days filled with endless sunshine, crashing waves, and the promise of adventure.

Down by the shoreline, Lila crouched beside a shallow rock pool filled with aquatic life. Tiny fish darted between the stones while a crab cuttled sideways, disappearing into a shadow. She felt like a scientist observing a miniature marine world.

Later, as the sun climbed higher, her brother Max complained of the heat. "I think I'm melting," he groaned.

That's why we packed sunscreen," Lila replied. "And maybe we should rest before the water starts disappearing."

Max frowned. "Water doesn't just disappear."

It does," Lila said confidently. "It's called evaporation. The heat turns water into vapor."

By afternoon, the beach was alive with laughter and color. Families gathered for picnics, and the salty breeze began to feel more refreshing. Lila leaned back on her towel, watching the sky shift slowly toward evening.

This is the best day," she said quietly.

As the sun dipped lower, she wished summer could last forever.

Comprehension activities

Summer MORPHOLOGY VOCABULARY
Name: _____ Date: _____

Lights of the Summer Fair

Answer the comprehension questions based on the story.

Question	Answer
What sights and sounds show that the fair is lively and exciting?	
Why is Noah interested in the biology stall?	
How does the setting change from day to night?	
What does Noah realise about summer during his visit to the fair?	
What is the main theme of the passage?	

Match the word to its meaning. Use the story to find context clues.

Word	Meaning
festival	the study of living things
migration	to make something feel new or fresh again
biology	a large celebration or event
refresh	activities done for enjoyment
recreation	movement of animals from one place to another
