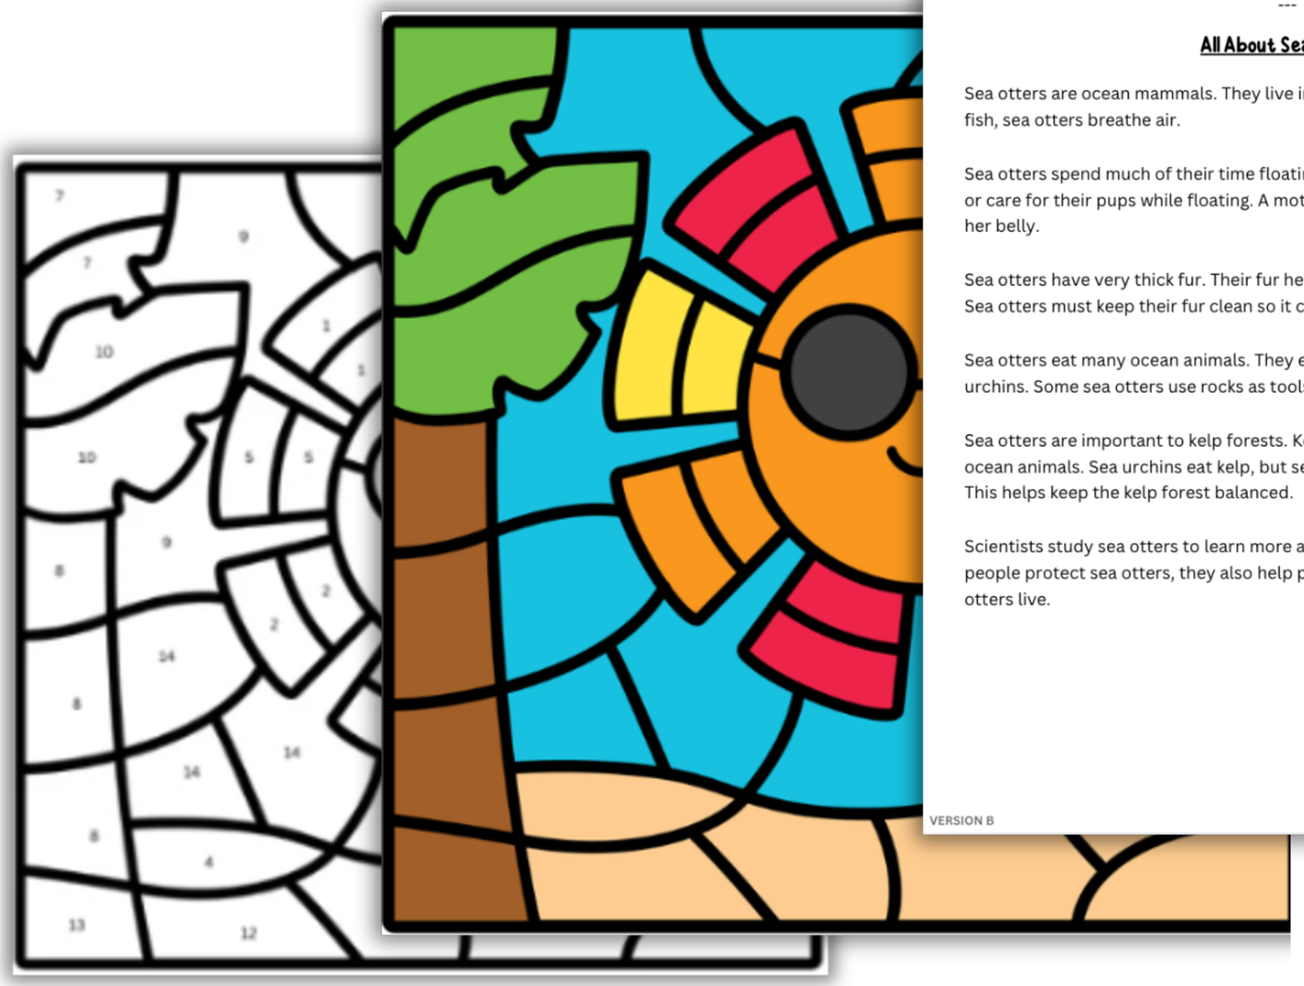
- Differentiated passages
- Easy to grade

Answer key included!



Instructions: Read the passage below. Then, answer the questions in the col by code activity.

All About Sea Otters

Sea otters are ocean mammals. They live in cold water near the coast. Unlike fish, sea otters breathe air.

Sea otters spend much of their time floating on their backs. They may rest, ea or care for their pups while floating. A mother sea otter often carries her pup her belly.

Sea otters have very thick fur. Their fur helps keep them warm in cold water. Sea otters must keep their fur clean so it can trap air and work well.

Sea otters eat many ocean animals. They eat clams, crabs, snails, and sea urchins. Some sea otters use rocks as tools to crack open hard shells.

Sea otters are important to kelp forests. Kelp gives food and shelter to many ocean animals. Sea urchins eat kelp, but sea otters help by eating sea urchins. This helps keep the kelp forest balanced.

Scientists study sea otters to learn more about their behavior and health. Wh people protect sea otters, they also help protect the ocean homes where sea otters live.
