

CLIMATE CHANGE BUNDLE

What is climate change?

The Earth's climate is changing.

It is **getting warmer** and it is getting warmer **faster** than at any time in history.

A hotter planet means disruptions to the natural balance.

Everything is connected. On Earth, oceans, land, plants, air, animals and the sun's energy influence each other.

Warmer climate means that the ice in the Arctic melts and the sea levels go up.

Rising sea levels in the Arctic means rising sea levels in other oceans. It also affects the weather and the air temperature as well as the oxygen levels.

Everything is connected and this means changes to the global climate.

Climate change means **long term changes in average weather pattern** across the world.

Climate change is a **global challenge**. To combat it requires that people work together. People from countries all over the world need to change their behaviour and **work together to solve problems** that occur due to the climate changes.

Think Dive © 2020

Living things grow and blossom if we care for them.

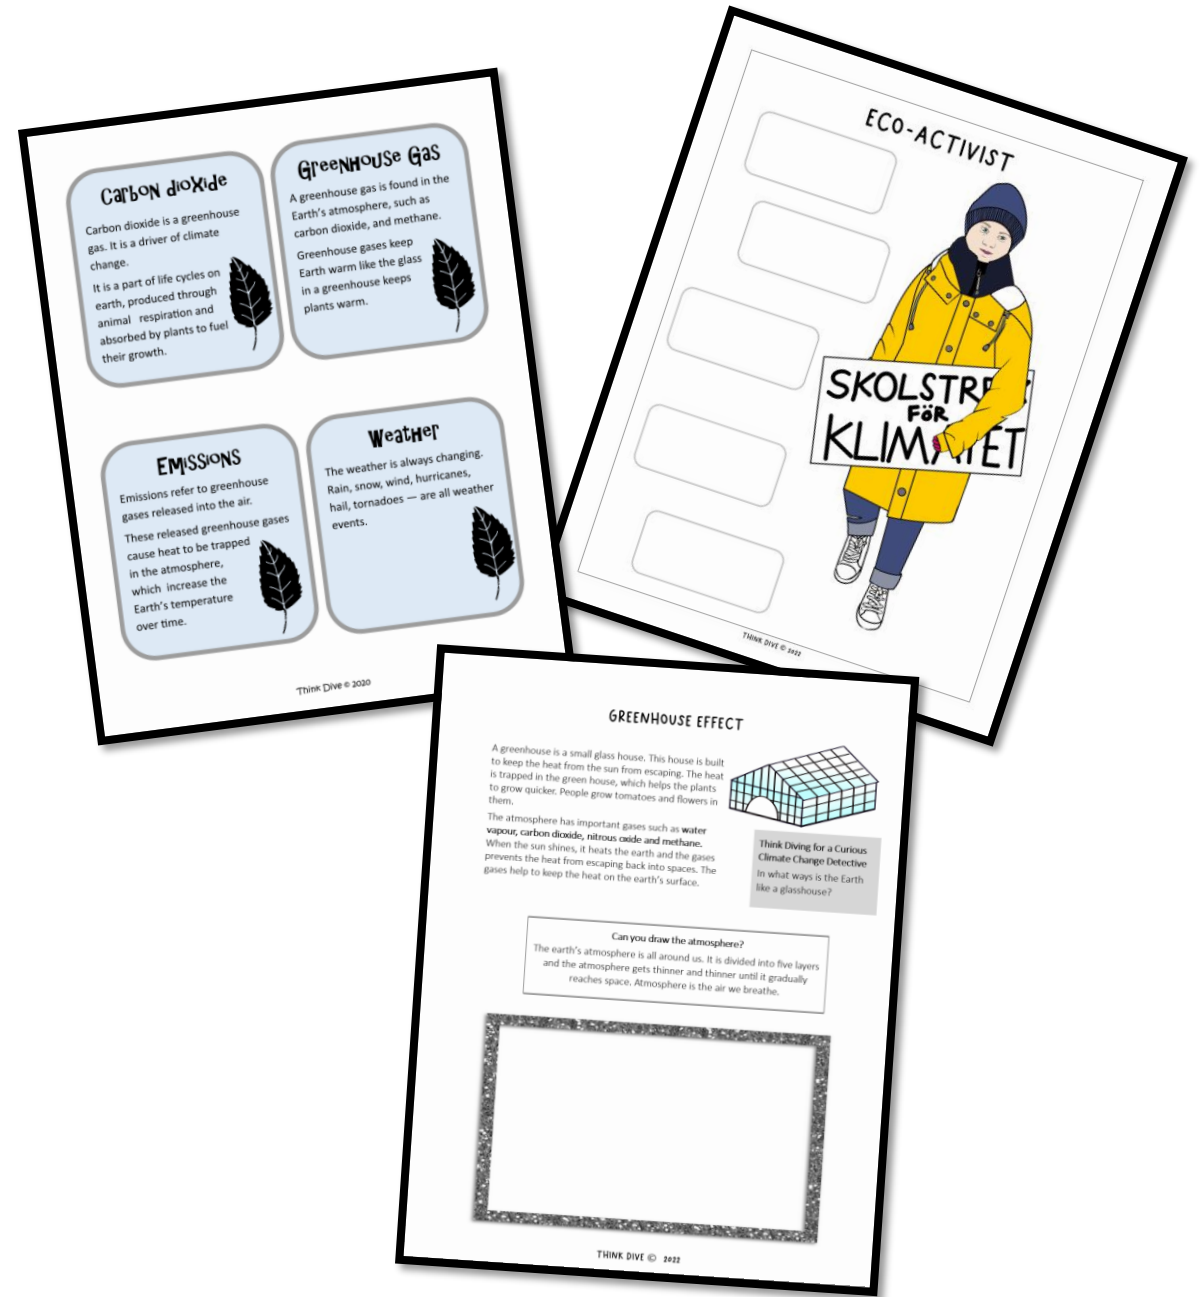

Young students are **curious about climate changes**. Inspire **environmental wonder** in young kids and explore ways that we all can work towards a better future.

Included in this bundle are resources that focus on **exploring solutions and ways to solve problems** related to changes in climate.

REVIEWS

“Great addition to my weather unit. Students found these resources engaging and easy to use.”

“my students used this at the end of the year for a fun unit that they were super interested in. they were able to really dive into this and learn a bunch of info about how they can help with climate change. thank you!!”
