FORM

Form brings things to life and unites the elements.
Form is when we take a flat shape and make it into a 3D form.
Forms have height, width and depth.
This means that we can view it from multiple angles.

A simple way to turn 2D flat shapes into 3D forms is by using
one point perspective.

Artists can also make objects look three-dimensional, i.e. the shapes appear to have depth as well as width and height. When they do this, artists are creating 'form'. How has the chalk artist achieved this effect in his artwork.

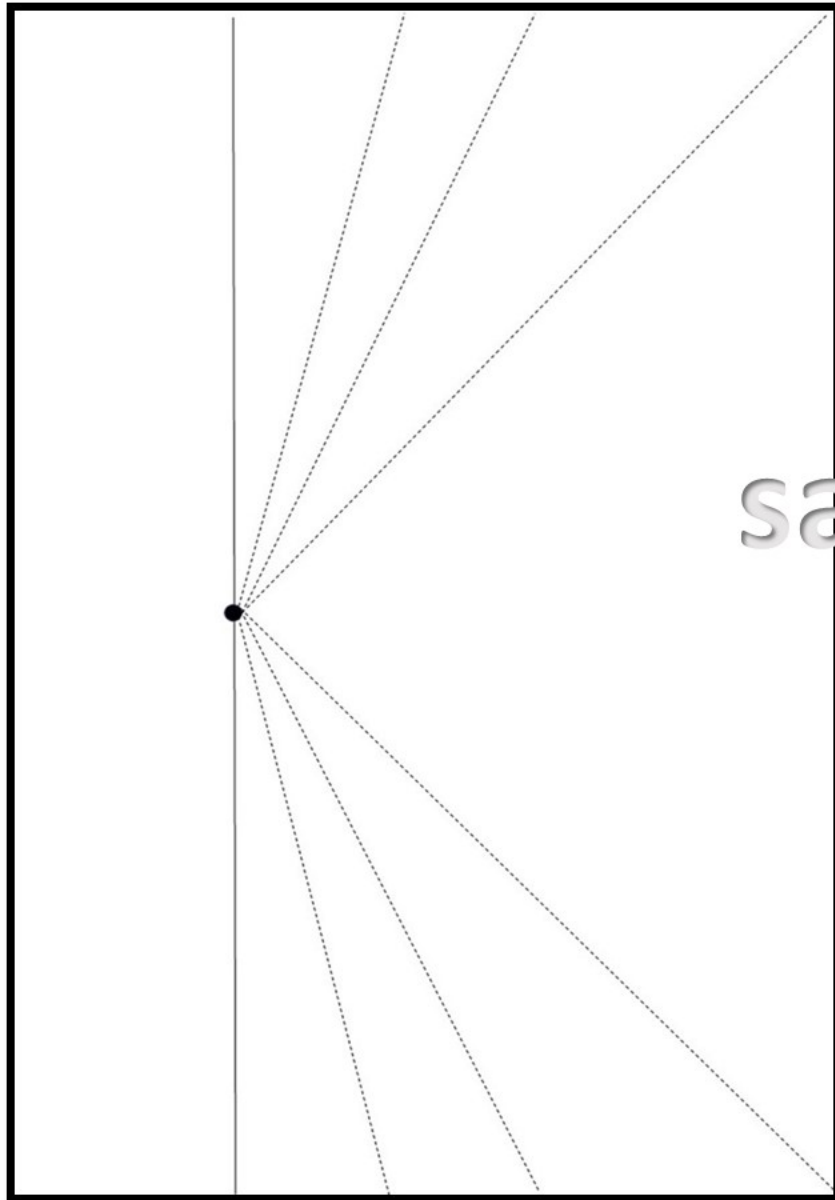

Watch the video that on FORM and use the template to draw the following landscape using the vanishing point and one point perspective.
