MULTIPLE CHOICE:

Derrick and Tracey are purchasing seeds for the garden. Derrick purchases a dozen corn seeds for x dollars and 1 lettuce starter for y dollars. He spent \$29 dollars. Tracey bought half a dozen corn seeds and 3 lettuce starters. She spent \$27. The system of equations representing this situation is shown below.

$12x + y = 29$
 $6x + 3y = 27$

Which statement is true?

A lettuce starter costs \$3 more than a corn seed

Derrick spent over 3x as much as Tracey did on lettuce starters

TRUE OR FALSE:

Molly is solving a problem with inequalities by graphing the solution. Her graph is below. Did she correctly graph the solution set to the inequality problem?

$$-18 < 3x \leq 6$$

NO

YES

Instructions, terms of use, credits, & more!

INSTRUCTIONS

[Click HERE to view video instructions!](#)

1. Print copies of the student recording sheet (slide #2).
2. When you're ready for the class to play, open the slideshow to slide #4.
3. Have students work individually or in pairs/groups.
4. Have students/groups take turns selecting an icon from slide #4. Click on the icon to go to the question slide.
5. Have students write their answer in the corresponding box on the recording sheet. Select a student/group to give their answer and click on the corresponding button.
6. If students have the correct answer on their sheet, they will add points to the column on the right of their recording sheet. If not, they will cross out their answer and write the correct one.
7. Click on the "Back home!" button to return to slide #4.
8. Repeat until all icons have been chosen and have disappeared from slide #4.
9. Have students total their points to find a winner!

DON'T FORGET!

Let us know how it goes in your classroom and leave a review!
