

10 OPINION PARAGRAPH PUZZLES

Should We Bring Back Extinct Animals?

The idea of bringing back animals from extinction, like the woolly mammoth, is too risky and should not happen.

First, if we brought back a massive creature like a woolly mammoth, it would struggle to find food and a safe place to live in the modern world.

Specifically, the world has completely changed since these animals were alive, and their old habitats do not exist anymore.

Trying to force these animals into environments that are not ready for them would be cruel and unfair to the animals themselves.

Another reason to stop this is that focusing too much on extinct animals takes away important money and time from saving species that are currently endangered.

For example, every dollar spent on trying to revive a long-dead animal is a dollar that could have saved a tiger or a rhino today.

We need to prioritize protecting the wildlife we still have before we start playing games with history.

In the end, we should stick to protecting living animals and leave the extinct ones in the past where they belong.

SHOULD TEENAGERS BE ALLOWED TO VOTE?

Teenagers should not be allowed to vote in national elections because they often lack enough life experience. One reason is that most teens do not pay taxes or worry about big financial decisions like adults do. Because they are not financially responsible, they don't always understand the issues related to the economy, such as lower taxes or budgeting. This lack of understanding makes it hard for them to make informed choices about candidates. Furthermore, many teenagers are easily influenced by what their friends or favorite social media stars say. For instance, they might vote for someone simply because a popular person told them to, without doing any research on their own. Voting based on popularity or passing trends is dangerous

Should Kids Be Allowed to Have Cell Phones?

Knowing they can quickly call for guidance or assistance gives both the child and parent a necessary feeling of peace of mind.

Kids should definitely be allowed to have their own cell phones because of safety and important communication.

Importantly, this practice helps them understand how to use the important property before they become adults.

Learning to keep track of a phone and manage its battery power is a good life skill for the future.

The most important thing is to keep them safe and secure.

**THESE SENTENCES
ARE SCRAMBLED**

For instance, if a school bus breaks down or a club meeting runs late, a child can immediately contact their parents for help.

Furthermore, having a personal device teaches kids how to be responsible with valuable technology they need to protect.

In conclusion, phones are a necessary tool for modern safety and developing responsibility.

ARE GRAPHIC NOVELS JUST AS VALUABLE AS TRADITIONAL FICTION BOOKS?

Graphic novels are absolutely just as valuable as traditional fiction books for helping students become strong readers. To start, looking at the drawings provides visual clues that make complicated plot ideas easier for a struggling reader to quickly grasp. In addition, this visual support is especially helpful for kids who are learning English or who have trouble visualizing scenes in their heads. Their exciting, fast-paced format encourages even reluctant readers to finish a book and enthusiastically look for another one. A second important point is that graphic novels often deal with very complex and important topics, just like serious regular books. For example, the combination of pictures and text in graphic novels helps readers understand the story and the characters' complex feelings much better. They tell stories about difficult historical moments, scientific concepts, and challenging personal issues, making the content meaningful and powerful for learning.

ANSWER KEYS

Should College Be Free?

Making college free for everyone is a great idea that would help our entire country. First, for many students, the huge cost of tuition stops them from getting the education they need. In other words, when college is expensive, many students can't go, which is simply unfair. There are many people who could be doctors, engineers, or scientists if they didn't have to pay for classes. A second reason is that many students want to become teachers, engineers, or doctors. If college is free, they can benefit from their knowledge and skills. Doctors will have more new patients, engineers will have more new projects, and scientists will have more new discoveries. Ultimately, providing free education will create a stronger workforce for the future. College is a smart move that benefits everyone.

Should We

The idea of bringing back a mammoth, is too risky and a massive creature like a woolly mammoth needs a safe place to live in a completely changed since the last ice age. Habitats do not exist anymore and the environments that are not suitable for the animals themselves. A lot of money is spent on extinct animals to save species that are currently endangered. It is spent on trying to revive a dodo, but we have saved a tiger or a rhino too. We still have a long way before we start to bring back the past where they belong.

ANSWER KEYS

Is Year-Round School a Good Idea?

Switching to a year-round school calendar without a long summer break would be a terrible change for students. First, the summer break is a vital time for kids to explore new hobbies and interests outside of the classroom. For example, students can visit grandparents who live far from school. These activities are essential for developing interests that school cannot teach. Summer also allows everyone to truly relax and recharge. In addition, teachers also need a break for the new school year, so they can return full of great ideas. This long break provides mental and physical restoration. For these reasons, the long summer break is the best choice.

Should Teenage

Teenagers should not be allowed to vote because they often lack enough life experience to make informed choices. They do not pay taxes or worry about the economic consequences of their choices. Because they are not financially independent, they do not understand the issues related to budgeting. This lack of understanding leads to uninformed choices about candidates. They are easily influenced by what their friends say. For instance, they might vote for a popular person told them to, without considering the merits. Voting based on popularity or peer pressure is not ideal. Elections should be about serious issues, and voters should have full life responsibilities before voting.

ANSWER KEYS

Should Driverless Cars Be Banned?

Banning driverless cars would be a mistake because they offer incredible benefits for safety and convenience. To begin, self-driving cars are programmed to follow all the traffic rules perfectly and never get tired or distracted. Humans sometimes make mistakes while driving, such as falling asleep at the wheel, which causes accidents. Self-driving cars do not make these silly human errors. Another benefit is that they provide freedom to people who cannot drive, such as Grandparents or people with physical disabilities. This means they can travel where they want without needing anyone else to drive. Finally, as technology advances, driverless cars could change the way we live by making travel more independent. Therefore, embracing driverless technology is the right choice.

Should Kids Be Allowed

Kids should definitely be allowed of safety and important commu that a phone helps a kid stay saf happen unexpectedly. For instan meeting runs late, a child can im Knowing they can quickly call for child and parent a necessary fee having a personal device teache valuable technology they need to phone and manage its battery p Ultimately, this practice helps the

Should There Be a Dress Code at Your School?

Schools should avoid having strict dress codes because clothes are an important way students express themselves. First and foremost, allowing students to pick their own clothes shows their identity and personal creativity. Specifically, wearing their favorite colors or patterns and demonstrating their interests on a single day. This freedom to choose helps them feel confident when they walk into the school. One reason is that buying only clothes that follow a strict dress code is an unnecessary financial cost for many families. Students already have outfits that fit well, but are uncomfortable. They don't buy all new expensive items. It is much easier to wear what they already own, as long as it meets the school's requirements. Schools should trust students to make their own choices and use their energy on learning.

Should Gum Chewing Be

I believe that chewing gum should be encouraged because it helps many students concentrate better. Research has shown that chewing a simple piece of

ANSWER KEYS

Should Kids Be Allowed to Watch TV on School Nights?

Kids should definitely be allowed to watch television on school nights for a short time as a necessary reward and for relaxation. First, watching a favorite show is an excellent way for children to unwind after a long and hard day of focusing on homework and school. Specifically, it provides a necessary break for the brain before bedtime and helps reduce any leftover stress from their schoolwork. Furthermore, this simple downtime allows their minds to recharge so they are ready to learn new concepts again the next morning. The second major reason is that many television programs are surprisingly educational and can teach kids important information and social skills. For instance, even comedies can teach valuable lessons about friendship, family, and understanding different emotions. Watching a historical documentary or a nature show can

What's That Sound?

Sound travels to our ears through vibrations that create invisible sound waves.

All sound begins when something vibrates, causing the air molecules around it to rapidly push and pull.

When you pluck a guitar string, the string moves back and forth quickly, creating these invisible waves in the air.

These sound waves then travel through the air, or another medium, until they reach your ear.

Sound can travel through solids and liquids too, which is why you can hear a boat motor when you swim underwater.

The speed of sound depends on the medium it travels through, moving much faster in solids than in air.

That's why you can hear a distant train sooner if you put your ear to the metal track.

SOUND WAVES

All sound begins when something vibrates, causing the air molecules around it to rapidly push and pull.

Sound travels to our ears through vibrations that create invisible sound waves.

These sound waves then travel through the air, or another medium, until they reach your ear.

The speed of sound depends on the medium it travels through, moving much faster in solids than in air.

When you pluck a guitar string, the string moves back and forth quickly, creating these invisible waves in the air.

In summary, sound is simply the transfer of energy through matter via vibration.

That's why you can hear a distant train sooner if you put your ear to the metal track.

Sound can travel through solids and liquids too, which is why you can hear a boat motor when you swim underwater.

The Importance of Recycling

Recycling is a simple way we can all help protect our environment.

For example, recycling plastic bottles and paper saves energy that would be used to create new products from raw materials.

This means that making a new plastic bottle from an old one uses less energy than making a new one from oil.

By recycling, we also reduce the amount of trash that ends up in our landfills, which helps keep our land clean.

If we don't recycle, all of our waste will just pile up in huge dumps, harming the soil and water.

Moreover, reusing old materials helps save our natural resources like trees and minerals.

Recycling paper, for instance, means fewer trees need to be cut down to make new paper.

Overall, recycling is a small action with a big positive impact on the planet.

THE IMPORTANCE OF RECYCLING

Recycling paper, for instance, means fewer trees need to be cut down to make new paper.

Recycling is a simple way we can all help protect our environment.
