Instructions: Read the passage below. Then, answer the questions in the color by code activity.

All About Sea Turtles

Sea turtles are ocean animals. They live in warm and temperate oceans around the world. Sea turtles are reptiles, so they are more closely related to snakes and lizards than to fish.

Sea turtles spend most of their lives in the ocean. They are strong swimmers and can travel long distances. Some sea turtles migrate many miles to find food or return to nesting beaches. Female sea turtles come onto land to lay their eggs in the sand.

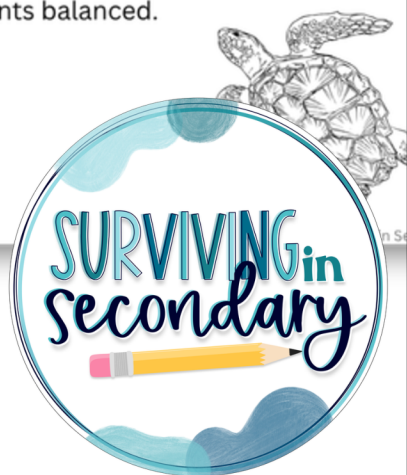

Baby sea turtles face many challenges from the moment they hatch. They must crawl from the nest to the ocean while avoiding birds, crabs, and other predators. Once in the water, they face dangers from larger animals and ocean conditions.

Sea turtles also face problems caused by people. Trash in the ocean can harm turtles if they mistake it for food. Fishing nets can accidentally trap them. Boats and coastal development can also affect their habitats.

People around the world work to help sea turtles. Some protect nesting beaches. Others help clean up trash along the coast. Scientists also study sea turtles to learn more about how to keep them safe.

Sea turtles play an important role in ocean ecosystems. They are part of the food chain and help keep ocean environments balanced.
